Innovative Solutions for
Your Evolving Business Needs

Apex Group, helps communications, utility, and energy companies solve their most complex business challenges. Our mission is to work with clients to create innovative technology solutions and achieve sustainable results. With extensive experience spanning more than 25 years, some of the largest private and public companies in the world partner with Apex to realize huge efficiencies in productivity and ROI.

Software Design and Development
Apex expertly maps customer needs to industry best practices and technology evolution. Recognized globally for our deep experience, talented staff, and high customer satisfaction, our established processes effectively manage the challenges of off-shoring and outsourced product development, helping our clients generate new revenue, increase cost effectiveness, and transition to next-generation technology.

GIS and Engineering Data Services
From data conversion to analysis and records management, Apex offers a comprehensive range of GIS services to various industries. Our deep knowledge of geospatial data combined with an around-the-clock, dual-shore service model enables us to deliver high-quality results at a substantially lower cost, with all project and technology management conducted by our US-based team.

Field Survey and Consultation
Tablet-based field data collection unlocks enormous efficiencies and cost savings for asset mapping and auditing projects. Apex's field survey technology simplifies accurate data collection while providing administrators with real-time visibility into their complete operation. Our solutions range from software licensing to full-service project management, including tablet rental, consultation and planning, and installation.

FTTx Design
We specialize in next-generation fiber network and systems design to help our clients deliver the highest level of service to their customers. Apex's design team of highly experienced professionals with extensive engineering expertise also provides support for all aspects of outside plant network infrastructure and fiber operations.
