

ExplorGIS

Field Data Collection at Your Fingertips

- **Communications** (Telco/Cable)
- **Engineering**
- **Utilities**

Mobile field data collection is unlocking enormous efficiencies and cost savings for asset mapping and auditing projects. What was once a largely manual process with ample opportunity for human error has become easier, instantaneous, and more accurate thanks to mobile technology.

The ExplorGIS tablet-based application will help you:

Simplify how you conduct field surveys

- Easily configures to your unique survey requirements
- Optimizes field assignments through its management portal
- Collects infrastructure data in connected or disconnected environments

Complete major survey projects in record time with unsurpassed accuracy and major cost savings

- Reduces field time by streamlining the data verification process
- Improves first-time data collection accuracy and eliminates repeat visits using a paperless, rule-based approach
- Enables better informed decisions faster using dynamic reporting
- Competitively priced

Make use of flexible options to satisfy your requirements

- License ExplorGIS as a software solution, or Apex can provide customized options based on your project requirements including tablet rental and full-service project management from consultation and planning to installation.

About Apex Group

We help communications, engineering, and utility organizations more effectively manage their people, data, and infrastructure. Our innovative engineering services and enterprise software solutions help you to gain a competitive advantage by enhancing productivity and improving quality of your entire operation, from planning and installation to network maintenance and upgrades.
